AUTOMATIC FARE COLLECTION TECHNOLOGY

GMV offers you a wide range of products to control passengers by selling single tickets, managing smart cards, and introducing advanced ticketing solutions like EMV payment and ABT. Our solutions are specifically designed for the transport market:

- Onboard equipment designed for managing the validation of transport titles, the selling of tickets, managing of EMV payment and the recharge of travel credits on smart cards.
- Station equipment designed for managing the validation of transport titles, the selling of tickets and the sale/recharge of travel credits on smart cards.
- Desktop management applications to control and monitor onboard and station equipment.
- Account-Based Ticketing including EMV technology in onboard equipment.

All our products have been tested to ensure they meet EC standards. The firm has a proven track record in producing unique, groundbreaking products with exclusive and ergonomic designs that will provide you with the maximum quality, dependability, rapidity, compatibility and performance guarantees, together with a low maintenance cost.

GMV is keen above all to come up with competitive solutions and it also tailors its systems to meet the particular needs of each client, guaranteeing enhanced company profitability in the following objectives:

- Cut down operation and maintenance costs.
- Obtain all management information in real time.
- Increase commercial speed.
- Boost its product range, encouraging customer loyalty.
- Increase the service quality as perceived by the customer.
- Drastically reduce fraud thanks to the use of secure technology.
- Integration with other onboard items (fleet management system, electronic signs, public address systems...)
- Introducing new sector trends like Account Based Ticketing and EMV payment.
